

# Web Developer

## SUMMARY:

- The Web Developer is responsible for the development of software applications for InquisiCorp, Corp. and all included brands, as well as all customer-facing websites. Develop, maintain, and support multiple ecommerce web applications and accompanying environments. Plan, design, code, test, and support the development, implementation, and execution of all software, application, and web projects. Ensure the accurate, timely, and cost-effective execution and delivery of all technical software and web programs in accordance with mission requirements, business objectives, and company core values. Collaborate with the software and web design team to execute and deliver all development and applications on time and within budget.

## DUTIES AND RESPONSIBILITIES:

- Research, design, develop, document, and modify software and web specifications throughout the software development and production life-cycle. Work with management and the software and web team to define implementation tasks, prepare time and cost estimates, review requirements to ensure projects meet customer needs, and provide technical advice when needed.
- Serve as a technical lead on assigned projects involving software and web application design, development, deployment, training, and web systems maintenance and support.
- Troubleshoot and fix existing software and website issues/errors as well as plan, manage, and implement future enhancements.
- Work with management and the software and web team to define development methodologies, establish and document code guidelines, enforce compliance with code guidelines, and ensure design patterns can be effectively maintained and extended.
- Produce performant and maintainable software that can integrate with other systems (such as back-end applications with front end applications) so the whole is easy to use, readily upgradable, and maintainable.
- Design, build, and implement the information architecture for new software packages, web pages, and sites to meet the needs of InquisiCorp's customers and stakeholders. Design, write, code, test, and analyze software programs and applications.
- Modify and customize outside/purchased software programs to integrate with internal programs so that they meet business needs.
- Strategically plan and prioritize web development projects and tasks assigned. Create and execute project work plans and revise as appropriate to meet changing needs and requirements.
- Perform active development while sharing procedural guidance and direction with the software and web team and with external vendor teams.
- Present proposed development and design solutions, including timelines, costs, and anticipated hurdles, to users and management in a timely, comprehensive, iterative, and understandable manner.

MINIMUM JOB REQUIREMENTS:

- A Bachelor's Degree in a computer science related field or at least 5 years of experience in a web development role or an equivalent combination of applicable education and experience is required.
- Fluency in technologies, to include Linux, Apache, MySQL, PHP, CSS, and JavaScript required.
- A high level of full stack LAMP development (Linux, Apache, PHP, MySQL) for frontend and backend systems is required.
- Magento 2 Development experience highly desired.
- Experience with Shopify and/or WordPress is a plus.
- Acumatica ERP experience a plus.

WORKING CONDITIONS AND PHYSICAL EFFORT:

- Work is normally performed in a typical interior/office work environment.
- No or very limited physical effort required.
- No or very limited exposure to physical risk.
