Microlearning with  SONLIGHT

Engineer

In today's podcast episode, we learned about 5 different types of engineers: civil, biomedical, mechanical, aerospace, and sound engineers.

Here are the 5 mentioned in the episode, with quick reminders:

- **Civil Engineer** – designs and builds roads, bridges, and buildings.
- **Biomedical Engineer** – creates medical devices, prosthetics, and health technology.
- **Mechanical Engineer** – designs machines, engines, and tools.
- **Aerospace Engineer** – works on airplanes, rockets, and spacecraft.
- **Sound Engineer** – manages recording, mixing, and sound quality for music, movies, and games.

What type of engineer would you want to be and why?

Draw yourself as the type of engineer you would want to be and something you would want to work on, build or design in the space below.
