Word Bank:

ocean, crustacean,  
soft, legs, regrow,  
50, molt

A lobster is a type of \_\_\_\_\_  
that lives in the \_\_\_\_\_. It has  
a hard outer shell and jointed  
\_\_\_\_\_. To grow, lobsters have  
to \_\_\_\_\_ because their shells  
do not stretch. After molting, their new  
shells are very \_\_\_\_\_, so they  
hide from predators.

Lobsters can even \_\_\_\_\_ lost  
claws or legs as they molt again. Some  
lobsters can live for more than  
\_\_\_\_\_ years and continue to  
grow their whole lives!
